
Prevención de la conjuntivitis

09, octubre

Picor, quemazón, enrojecimiento, fotosensibilidad, sensación de cuerpo extraño y lagrimeo excesivo son síntomas que alertan de la presencia de conjuntivitis.

La clave para prevenirla es extremar la higiene, sobre todo en el caso de los usuarios de lentes de contacto, las personas alérgicas o que padecen ojo seco y, especialmente, los niños.

La conjuntivitis es una inflamación o infección de la conjuntiva relativamente frecuente. Suele estar causada por una infección vírica o bacteriana o bien puede deberse a una reacción alérgica a agentes irritantes en el aire (como polen o humo), al cloro y otras sustancias químicas del agua de las piscinas o a los componentes de cosméticos u otros productos que entran en contacto con nuestros ojos.
